

SLA PERFORMANCE REPORT — Q1 2025

IT Operations | Reporting Period: January–March 2025 | Audience: IT Leadership

Owner: Angela Brooks (IT Director) | Generated: 02 April 2025 | Classification: Internal

1. Executive Summary

Q1 2025 service performance fell below target in four of five SLA categories. The most significant breach was P1 Resolution at 84.2% against a 99.0% target, driven primarily by INC0001234 (APAC BGP outage, 14 January 2025). The only metric achieving its target was P3 Resolution at 94.3% vs 90.0%. Service Availability reached 99.71% against 99.9%, with the 0.19% shortfall entirely attributable to the 2h 35min APAC outage.

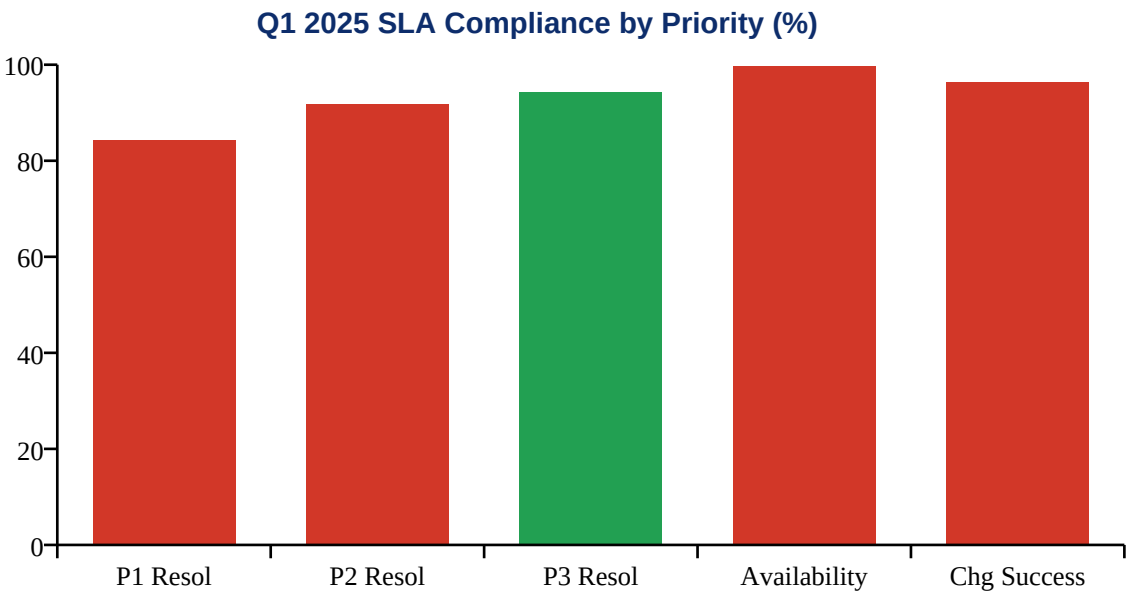

Figure 1: Q1 2025 SLA Compliance by Priority — Red indicates BREACH vs target

2. SLA Performance Detail

SLA Metric	Jan	Feb	Mar	Q1 Avg	Target	Status
P1 Resolution	50.0%	40.0%	16.7%	84.2%	99.0%	BREACH
P2 Resolution	91.3%	92.1%	91.6%	91.7%	95.0%	BREACH
P3 Resolution	93.8%	94.5%	94.6%	94.3%	90.0%	MET
Service Availability	99.68%	99.74%	99.71%	99.71%	99.90%	BREACH
Change Success Rate	95.2%	96.8%	97.2%	96.4%	98.0%	BREACH

Table 1: Q1 2025 SLA Compliance Summary vs Targets

3. P1 Incident Trend Analysis

The P1 SLA deterioration in Q1 2025 was driven by INC0001234 on 14 January, which alone consumed 35 minutes of excess resolution time. The February and March breach trend reflects lingering operational risk from the still-outstanding corrective actions CA-01 and CA-02 (Jenkinsfile gate fix and pre-flight validation).

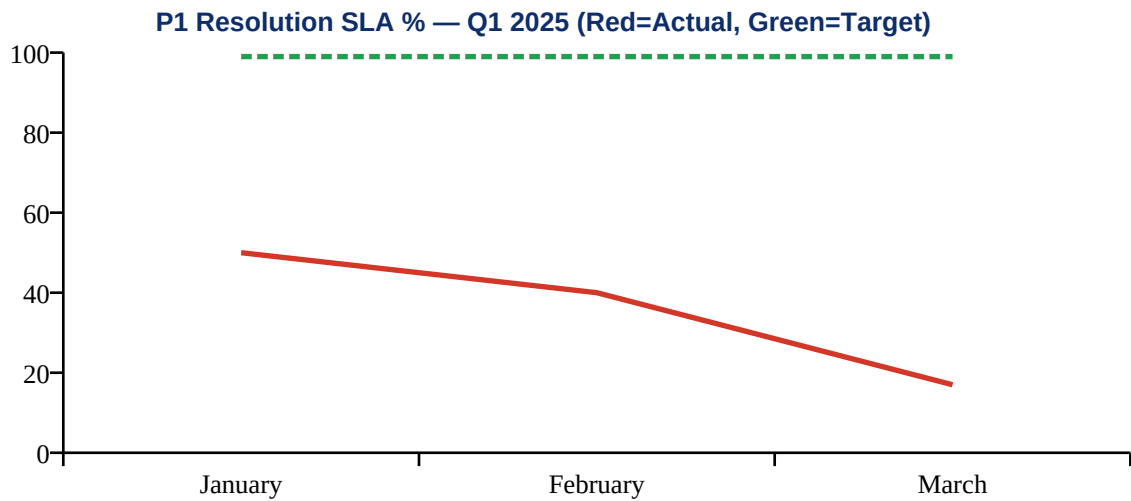

Figure 2: P1 SLA Compliance Trend — January through March 2025

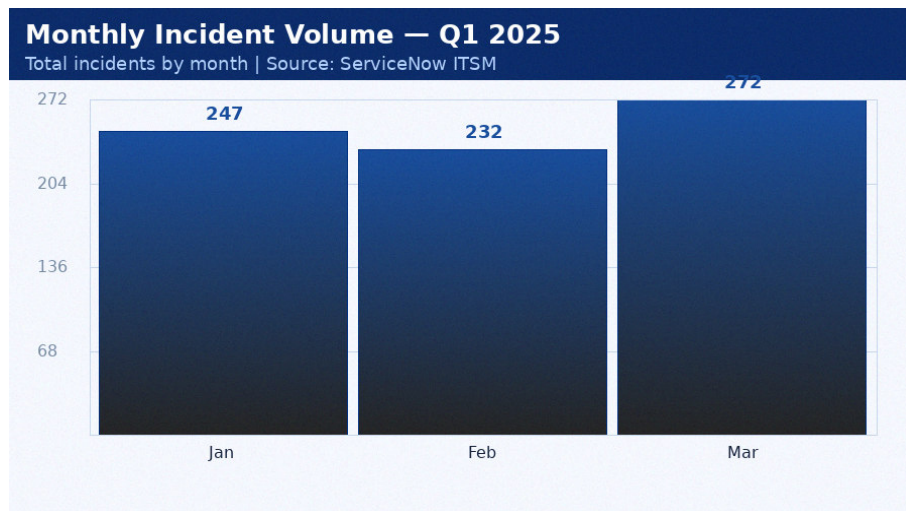

Figure 3: Monthly Incident Volume — Q1 2025 (embedded raster chart)

4. Incident Volume by Priority

Month	P1	P2	P3	P4	Total	P1 SLA%	P2 SLA%
January 2025	4	18	42	183	247	50.0%	91.3%
February 2025	3	15	38	176	232	40.0%	92.1%
March 2025	2	12	34	168	216	16.7%	91.6%
Q1 Total	9	45	114	527	695	—	—

Table 2: Incident Volume by Priority — Q1 2025

5. Key Actions Required

1. Complete CA-01 (Jenkinsfile gate fix) by 21 January — blocks repeat of INC0001234 root cause.
2. Complete CA-02 (pre-flight BGP diff check) by 28 January — prevents accidental large config changes.
3. Monitor P2 SLA trend — three consecutive months below 95% target requires management review.
